

Next Generation

Ahead of competition

A photograph of two men standing on the wooden deck of a sailboat, looking out at a vast blue ocean under a bright blue sky with scattered white clouds. The man on the left is wearing a red hooded jacket and black shorts, while the man on the right is wearing a dark blue jacket and light-colored shorts, pointing his right arm towards the horizon. The boat's white hull and rigging are visible in the foreground.

«As a reliable partner, Bossard not only uncovers your company's potential for optimization, but has the necessary expertise, tools and proven solutions in implementing the results from the value stream analysis with you.»

FORWARD-LOOKING AND PRACTICAL

We design costs away –
it's all about execution!

Bossard Next Generation is a comprehensive service for design and process optimization focused on boosting manufacturing productivity.

Based on value stream analysis, Bossard Next Generation identifies potential optimization areas for higher productivity and shorter throughput times. This ensures your competitive edge for the next generation of your products.

Bossard Next Generation is unique, guiding you from concept to implementation. As a reliable partner, Bossard not only uncovers your company's potential for optimization, but also has the expertise, tools and proven solutions in implementing the results of the value stream analysis.

Together, we can achieve higher productivity and lower total cost of ownership (TCO).

Your benefits

with Bossard Next Generation

- Shortened throughput times
- Reduced manufacturing costs
- Increased productivity
- Accelerated innovation cycles
- Improved flexibility

Together with you we implement the results of the value stream analysis.

Product Solutions	Application Engineering	Customer Logistics	Production
BOSSARD DO-HOW – Possible measures with measurable results:			
Multifunctional fastening elements	Design and assortment optimization	Comprehensive logistic concepts	Value stream mapping
Engineered products	Functional optimization	Assembly kits	LEAN projects
Product solutions management	Application engineering analysis	C-parts management	Consulting and seminars

Challenges on the market

Faster, better and lower-cost production, shortened innovation cycles and the ability to master the array of choices demanded – the market is constantly challenging companies to come up with something new. To get ahead in this environment, Bossard is the right partner for you.

Did you know that nearly 50% of all the individual parts of your products are fastening elements? Thanks to our many years of experience and cooperation with production facilities around the world, we have broad know-how and even broader do-how along the value creation chain.

Our service

You receive a customized report containing concrete recommendations based on the analysis we performed.

We are your competent partner from the tailor-made concept to successful implementation on the market.

The value stream analysis is conducted on site and uncovers the optimization potential in your design and production process.

What’s true in sailing is also true for value creation processes – making the right decisions and setting the right course. With you as the captain, the Bossard crews are ready to supports you from start to finish.

How we do it

In your running production and assembly, we conduct a value stream analysis focused on fastening technology and identify optimization potential in your design and production process for the next generation of your products.

With Bossard Next Generation, we guarantee precise methodology that you can track at any time.

Bossard Next Generation provides you with an analysis report containing value stream mapping and specific recommendations for action. The analysis report and documentation is your foundation for making decisions about optimization projects.

We would be happy to support you in executing these optimization projects, because that is precisely where our many years of comprehensive practical experience come in.

Plan >	Execute >	Check >	Adapt >
Plan a change using Bossard’s Next Generation service	Value stream analysis at customer site	Evaluate analysis, optimization potential, report containing recommendations	Implement changes, make modifications
